BOOK PROJECT

Beyond the Rubicon: Command and Control in Regional Nuclear Powers

This project uses archival and original interview data with political and military elites from India, Pakistan, apartheid-South Africa, and the United Kingdom to explain how conventional military threats, domestic political instability, and civil-military relations interact to influence nuclear command and control systems. The project also develops a new conceptual framework that emphasizes crisis dynamics to better evaluate command and control in regional nuclear powers and identify the challenges that command and control systems pose for crisis stability.
